INTRODUCTION

LEFEEF is a forward-thinking blockchain company dedicated to transforming the service industry through innovative blockchain solutions.

Our mission is to create a **Decentralized Universal Services Platform (DUSP)** that seamlessly connects users with a diverse range of decentralized online services, from freelancing and handyman services to online training programs.

LEFEEF strives to introduce a new innovative **POS/PoH Blockchain**, eventually becoming an incubator of Online Services with a native LEFEEF token under a unified ecosystem.

DEFINITIONS

*LEFEEF ECOSYSTEM

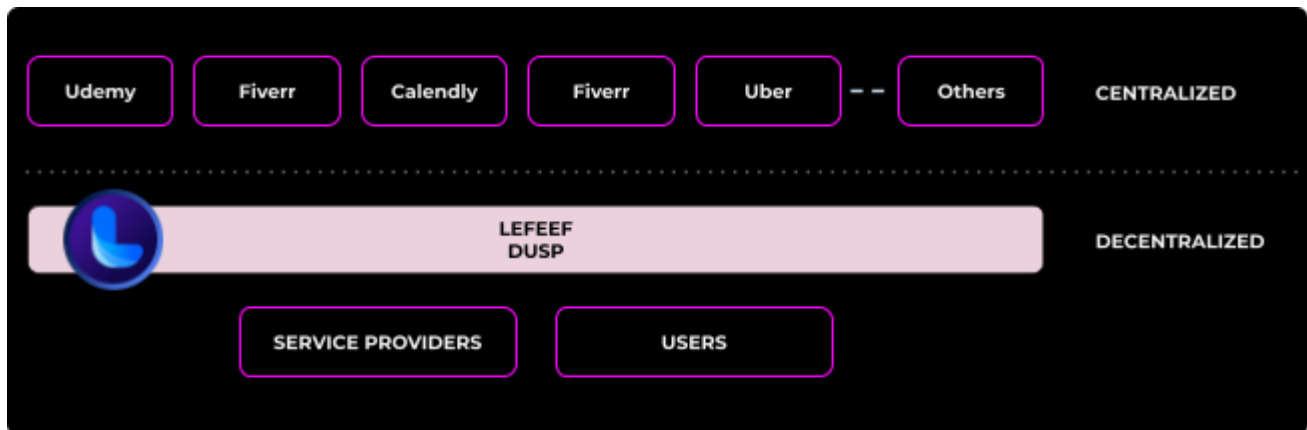

ENTERPRISE, the company of masterminds behind LEFEEF

BLOCKCHAIN, innovative POS/PoH Blockchain

TOKEN, the native utility token

* Dictionary Definition: Dense shade trees

By leveraging blockchain technology, we ensure that our platform is secure, transparent, and efficient, meeting the evolving needs of our global community from a single access point.

LEFEEF is designed to create a fair, transparent, and inclusive platform where all stakeholders can contribute to its growth and success. By leveraging the principles of decentralization and community-driven decision-making, LEFEEF aims to build a platform that not only meets the needs of its users but also evolves with the changing landscape of decentralized services. Through active participation and collaboration, the LEFEEF community can ensure that the platform remains innovative, accountable, and sustainable for years to come.

Problems LEFEEF and DUSP Aim to Solve

The advent of blockchain technology has opened new horizons for decentralized applications, creating opportunities to solve persistent problems in various sectors. LEFEEF, through its **Decentralized Universal Services Platform (DUSP)**, is designed to address several critical issues faced by users and service providers in today's digital economy.

1. Fragmentation of Services

Problem: In the current digital landscape, users often need to navigate multiple platforms to access different services, such as freelancing, handyman services, and online training. This fragmentation creates inefficiencies, requiring multiple logins, disparate user interfaces, and varied payment systems.

Solution: LEFEEF consolidates these services into a single, unified platform. DUSP offers a one-stop solution where users can access various decentralized services seamlessly. This integration simplifies the user experience, reduces administrative overhead, and provides a cohesive service ecosystem.

2. Lack of Transparency and Trust

Problem: Many traditional service platforms operate with opaque processes, leading to trust issues between users and service providers. Centralized control can result in data manipulation, biased decision-making, and unfair practices.

Solution: DUSP leverages blockchain technology to enhance transparency and trust. By utilizing smart contracts and decentralized governance, LEFEEF ensures that all transactions and operations are verifiable and immutable. This approach builds trust among users, knowing that the platform operates with integrity and fairness.

3. Inefficient Payment Systems

Problem: The conventional payment systems across various service platforms are often slow, expensive, and complicated. They can involve multiple intermediaries, high transaction fees, and delays, particularly for cross-border transactions.

Solution: LEFEEF introduces a unified payment system using the LEFEEF token, streamlining payments across all services on the platform. This system reduces transaction costs, speeds up processing times, and eliminates the need for multiple payment methods. Users and service providers benefit from quick, cost-effective transactions facilitated by blockchain technology.

4. Limited Access to Services

Problem: Access to essential services can be restricted due to geographic, economic, or technological barriers. Traditional service platforms might not be available or functional in certain regions, limiting users' ability to access needed services.

Solution: LEFEEF's global reach ensures that services are accessible to a broader audience, regardless of location. The decentralized nature of DUSP means that anyone with an internet

connection can utilize the platform. Additionally, LEFEEF's mobile app ensures that users in remote or underdeveloped areas can still benefit from the platform's offerings.

5. Inconsistent Quality and Reliability

Problem: Service quality and reliability can vary significantly across different platforms and providers. Users face challenges in finding trustworthy providers and ensuring consistent service delivery.

Solution: LEFEEF implements a robust rating and review system powered by blockchain, ensuring that feedback is genuine and cannot be tampered with. This system helps users make informed decisions based on the experiences of others, fostering a community-driven quality assurance mechanism.

6. Complex Scheduling and Coordination

Problem: Managing multiple service bookings and schedules can be complex and time-consuming. Users often struggle to coordinate different services, leading to missed appointments and inefficiencies.

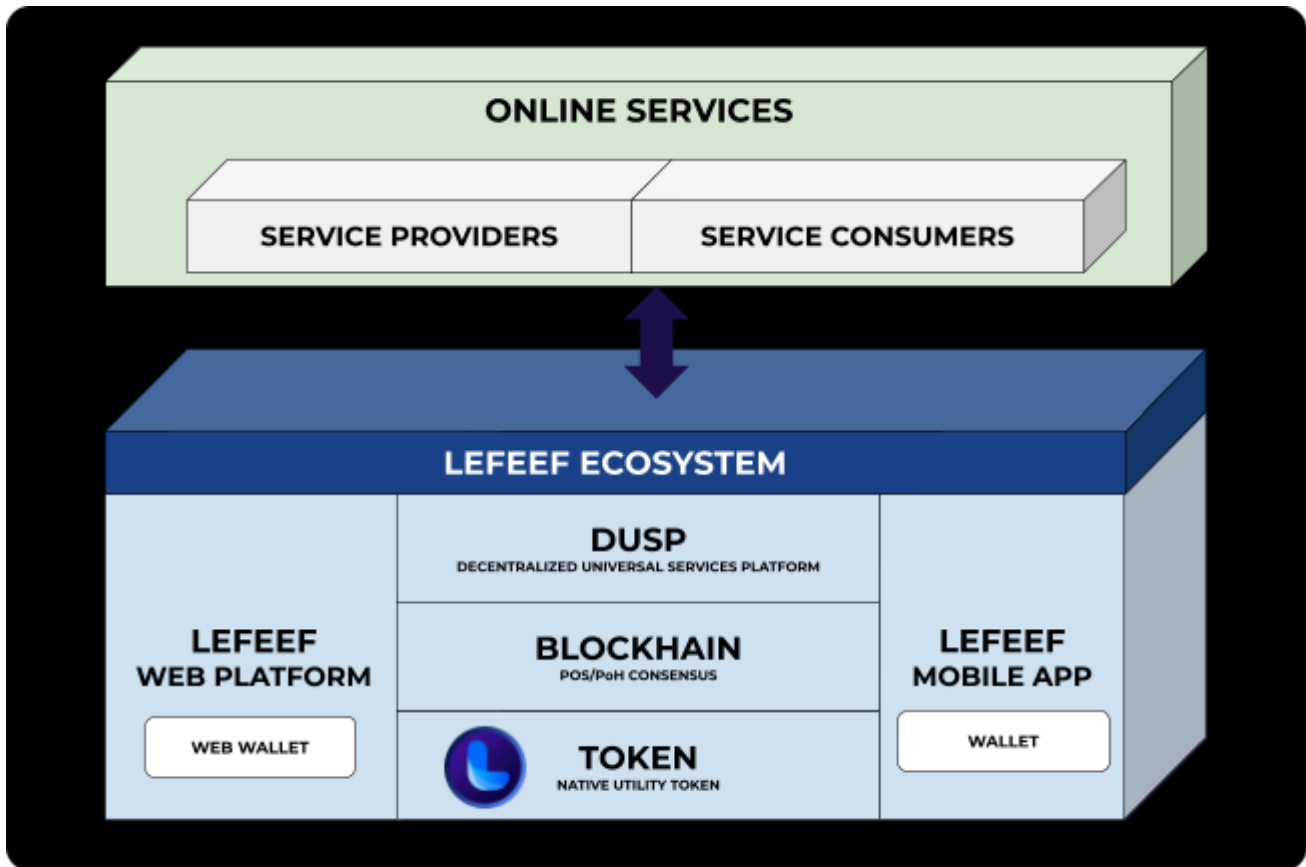

Solution: LEFEEF offers an integrated scheduling and booking feature within the DUSP platform. Users can easily manage, update, and coordinate their service appointments from a single interface. This built-in calendar functionality allows for seamless rescheduling, cancellations, and updates, enhancing overall user convenience.

7. Content Protection & Security

Problem: Security is a paramount concern in the digital age, where data breaches and cyber threats are increasingly common. LEFEEF addresses these security challenges through its innovative use of blockchain technology and decentralized principles, offering significant improvements over traditional online services.

Solution: LEFEEF leverages smart contracts to automate and secure transactions between users and service providers. These self-executing contracts run on the blockchain and automatically enforce the terms of an agreement. By eliminating the need for intermediaries, smart contracts reduce the risk of human error and fraud, ensuring that all parties adhere to the agreed-upon terms.

THE RATIONALE

Single Point of Access

The traditional service industry is often fragmented, with users needing to navigate multiple platforms to access different services. This can lead to inefficiencies, higher costs, and a poor user experience. LEFEEF addresses this issue by providing a single point of access for a wide range of services. Whether you need a freelancer for a project, a handyman for home repairs, or online training, you can find and book all these services through one unified platform. This simplification enhances convenience and streamlines the user experience.

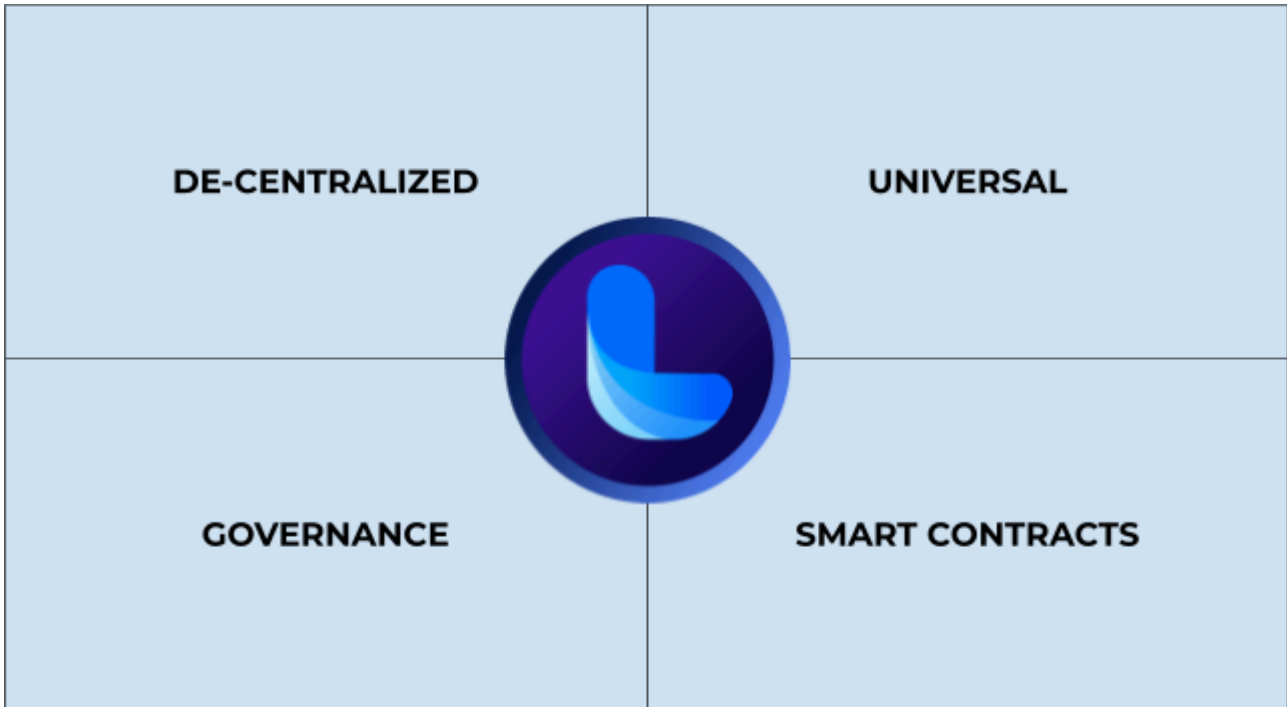

Single Platform Access

Managing multiple accounts and navigating through different service providers can be cumbersome and time-consuming. LEFEEF consolidates various service industries into a single platform, eliminating the need for multiple logins and accounts. Users can manage all their service needs from one dashboard, making it easier to track transactions, communicate with service providers, and manage payments. This integration not only saves time but also creates a more cohesive and user-friendly environment.

Decentralized Online Services

Traditional service platforms often involve intermediaries that can increase costs and introduce inefficiencies. LEFEEF leverages blockchain technology to decentralize online services, removing the need for intermediaries and ensuring direct, peer-to-peer interactions. This

decentralization enhances security, as transactions are recorded on an immutable ledger, and increases transparency, as all parties can verify transaction details. Additionally, decentralized services reduce costs by eliminating intermediary fees and speeding up transaction times, providing a more efficient and cost-effective solution for both users and service providers.

By integrating these three core principles—single point of access, single platform access, and decentralized online services— LEFEEF aims to revolutionize the service industry. We provide a seamless, secure, and efficient platform that addresses the common pain points faced by users and service providers, paving the way for a new era of decentralized services.

REAL LIFE USE CASE

Meet Sarah, a Busy Professional and Homeowner

Profile:

- **Name:** Sarah
- **Occupation:** Marketing Manager
- **Daily Challenges:** Balancing a demanding job with household responsibilities

Sarah's Challenges

Sarah is a marketing manager who works long hours and frequently travels for business. She has little time to manage her household chores, find reliable service providers for home repairs, or enhance her professional skills through additional training. The fragmentation of the service industry makes it difficult for her to find trustworthy service providers quickly and efficiently.

Additionally, Sarah faces the challenge of managing multiple apps from various service providers, each with different accounts, emails, and payment methods. Losing her phone would make recovering all her accounts a tough task. Coordinating multiple services, such as booking

a ride while sending her car for repair and scheduling a handyman for home repairs, can be particularly challenging, especially when some bookings are instant and others are scheduled.

How Sarah Uses LEFEEF

Single Point of Access: Sarah logs into the LEFEEF platform, where she has access to a variety of services, all in one place. She no longer needs to visit multiple websites or download different apps to manage her household and professional needs.

Finding a Handyman: Sarah notices that her kitchen sink is leaking and needs immediate repair. Using the geo-searching feature on LEFEEF, she quickly finds a verified handyman nearby. The integrated Google Maps navigation helps her confirm the handyman's proximity and estimated time of arrival.

Booking a Ride: On the same day, Sarah needs to send her car for repair and book a ride to get to work. She easily arranges for a ride through the LEFEEF platform, coordinating the timing with her handyman appointment. The unified system allows her to manage both tasks seamlessly.

Booking a Freelancer: At work, Sarah needs a freelance graphic designer for a last-minute project. Through LEFEEF, she easily connects with a qualified freelancer, reviews their portfolio, and hires them for the job. The transaction is secure and transparent, thanks to the blockchain-based payment system.

Enrolling in Online Training: To stay ahead in her career, Sarah decides to take an online course on digital marketing strategies. She finds a high-quality training program on LEFEEF and enrolls using the LEFEEF token, benefiting from the platform's seamless payment process.

Scheduling Appointments: Sarah appreciates the built-in booking calendar feature of the LEFEEF app. She schedules her handyman appointment and her online training sessions directly through the platform. The calendar allows her to manage her time efficiently, ensuring she never double-books or misses an appointment.

Managing Bookings: With the LEFEEF platform, Sarah can take actions such as canceling, postponing, or updating her service bookings. This flexibility is particularly useful when her schedule changes unexpectedly.

Exploring Future Services: Sarah is excited about LEFEEF's plans to introduce additional services like real estate and pet care. She looks forward to easily accessing these services through the same platform in the future.

Unified Payment System: With LEFEEF's unified payment system, Sarah pays for all her services using the LEFEEF token. This simplifies her financial management, allowing her to track all her transactions in one place.

Managing Everything on One Platform: Sarah tracks all her service requests, notifications, communicates with service providers through the built-in instant chat, and manages payments through a single dashboard. The use of smart contracts ensures that payments are automatically released once the services are satisfactorily completed, providing her peace of mind.

Decentralized and Secure: Sarah feels confident using LEFEEF because of its decentralized nature. She knows that her transactions are secure and that the transparency of the blockchain protects her from potential fraud.

The Impact on Sarah's Life

- **Time-Saving:** By consolidating all her service needs into one platform, Sarah saves time and reduces the stress of managing multiple service providers.
- **Enhanced Convenience:** With geo-searching and built-in navigation, finding and coordinating with service providers is effortless.
- **Cost Efficiency:** The elimination of intermediary fees through decentralized services means Sarah gets better value for her money.
- **Professional Growth:** Access to online training and freelance services helps Sarah enhance her skills and manage work projects more effectively.
- **Future-Proof:** With the upcoming introduction of services like real estate and pet care, Sarah knows that LEFEEF will continue to meet her evolving needs.
- **Efficient Scheduling:** The booking calendar feature allows Sarah to efficiently schedule, cancel, postpone, or update her appointments from a single platform.
- **Simplified Account Management:** Sarah no longer worries about managing multiple accounts with different emails and payment methods. If she loses her phone, recovering her account is straightforward through LEFEEF's secure platform.
- **Peace of Mind:** The security and transparency of blockchain technology ensure that Sarah's transactions are protected, and smart contracts guarantee that she only pays for satisfactorily completed services.

Through LEFEEF, Sarah efficiently manages her busy life, balancing her professional responsibilities with personal needs, all while benefiting from a secure, transparent, and decentralized service platform. The anticipation of new services, the unified payment system, and the booking management features further enhance her confidence in the platform's ability to support her diverse requirements.

MARKET OPPORTUNITY

The global service industry is fragmented, with users often facing challenges such as high fees, lack of transparency, and unreliable service providers. Traditional platforms charge significant commissions, intermediaries add layers of complexity, and users have limited trust in service providers. The rise of the gig economy and the increasing demand for on-demand services present a substantial market opportunity for a decentralized solution.

By integrating blockchain technology, Lefeef aims to address these issues, providing a secure, transparent, and efficient platform for both users and service providers. Our platform removes intermediaries, reduces transaction costs, ensures transparency, and builds trust between parties, revolutionizing the way services are accessed and delivered.

Competitive Analysis

The service industry is crowded with various platforms offering decentralized services. However, many existing solutions suffer from issues such as high fees, lack of transparency, limited scalability, and inefficient payment systems. LEFEEF aims to overcome these challenges by

leveraging advanced blockchain technology to create a unified, secure, and transparent ecosystem.

Unique Advantages of LEFEEF

- Decentralization:** Unlike traditional platforms, LEFEEF operates on a decentralized blockchain network, eliminating the need for intermediaries and enhancing transparency and trust.
- Blockchain Integration:** LEFEEF leverages blockchain technology to ensure secure and tamper-proof transactions, providing a transparent and auditable trail.
- Smart Contracts:** Smart contracts automate and enforce service agreements, reducing disputes and ensuring seamless transactions.
- Crypto Payments:** LEFEEF supports multiple cryptocurrencies, including its native LEFEEF token, offering secure, fast, and cost-effective payments for services.
- Low Transaction Fees:** By removing intermediaries, LEFEEF reduces transaction costs, providing better value for both users and service providers.
- Unified Platform:** LEFEEF consolidates various service industries into a single platform, simplifying the user experience and enhancing convenience.
- Geo-Searching:** Advanced geo-searching features allow users to find service providers nearby, improving service accessibility and efficiency.
- Built-in Booking Calendar:** Integrated booking and scheduling features streamline the management of service appointments.
- Blockchain-based Rating & Review System:** Ensures genuine and tamper-proof feedback, helping users make informed decisions.
- Service Variety:** LEFEEF supports a wide range of services, from freelancing and handyman tasks to online training programs.
- AI Integration:** AI-powered assistant helps manage bookings and provides a seamless user experience.

12. **Interoperability:** LEFEEF's platform can integrate with various external services and blockchain networks, enhancing functionality and expanding service offerings.

Addressing Market Gaps

1. **Transparency and Trust:** LEFEEF's blockchain-based platform ensures transparency and builds trust by recording all transactions on an immutable ledger.
2. **Efficiency:** By leveraging blockchain technology, LEFEEF reduces transaction times and costs, providing a more efficient solution compared to traditional platforms.
3. **Accessibility:** LEFEEF's global reach ensures services are accessible to a broader audience, regardless of location.
4. **Cost-effectiveness:** Eliminating intermediaries and supporting crypto payments significantly reduce transaction fees, making services more affordable.
5. **Security:** Advanced encryption and smart contracts enhance security, protecting users' data and funds.

Strategic Positioning

LEFEEF positions itself as a pioneer in the service industry by offering a decentralized, blockchain-based platform that addresses the inefficiencies and shortcomings of traditional service platforms. By providing a secure, transparent, and cost-effective solution, LEFEEF aims to attract a global user base and establish itself as a leader in the decentralized service market.

THE LEFEEF PLATFORM

Overview

The LEFEEF platform is designed to unify various service industries under a single, decentralized ecosystem. By leveraging blockchain technology, we offer a platform where users can access a wide range of services without the need for intermediaries. Our platform supports multiple services, including freelancing, handyman tasks, and online training, ensuring a seamless experience for all users.

Key Features

- **Universal Services:** Easily find, book, manage and complete from a spectrum of services online from a single platform. from handymen, online training, rides to freelancers. Users can take multiple roles and become both Service Providers and Consumers.
- **Geo-Searching:** Our advanced geo-searching feature allows you to find services near your location. Simply input your requirements, and our platform will connect you with the best local service providers.
- **Built-in Navigation:** Navigate to service locations seamlessly with integrated Google Maps, making it easy to find and reach service providers.

- **Crypto Payments:** Our platform supports multiple cryptocurrencies, including the LEFEEF token, ensuring secure, fast, and cost-effective payments for services.
- **Built-in Booking Calendar:** Our platform supports multiple cryptocurrencies, including the LEFEEF token, ensuring secure, fast, and cost-effective payments for services.
- **Built-in Digital Wallet:** Manage your funds & payment from a unified crypto Wallet, pay using LEFEEF token.
- **AI Assistant:** Simply give voice commands to the AI Assistant to manage your bookings instantly without making a sweat.
- **Proof of History [POH]:** Used in conjunction with other Proof of Stake consensus mechanisms to enhance the scalability and performance of the Blockchain network.
- **Governance:** At LEFEEF, we believe that a strong and transparent governance structure is fundamental to the success and sustainability of our platform. Our governance model is designed to ensure that all stakeholders, including users, service providers, and token holders, have a voice in the development and management of the platform.
- **Reward System:** Service providers with higher performance and reviews are rewarded in tokens for their performance and contribution, the DUSP engine measures the community contribution and rewards them tokens in exchange.

User Benefits

- **Secure Transactions:** Blockchain technology ensures that all transactions are secure and tamper-proof. Users' financial information and service details are protected with advanced encryption methods, providing peace of mind.
- **Transparency:** Every transaction on our platform is recorded on the blockchain, creating a transparent and auditable trail. This transparency enhances trust and accountability, as users and service providers can verify transaction details and histories.
- **Reliability:** Every Service Provider/handyman is verified during registration, through KYC or KYB, users can also rely on the blockchain internals in transaction verification to get tasks done reliably.
- **Efficiency:** Blockchain technology streamlines the payment process, reducing transaction times and costs. Traditional financial systems often involve multiple intermediaries, leading to delays and additional fees. With blockchain, payments are processed directly between users and service providers, ensuring fast and cost-effective transactions.
- **Smart Contracts:** Smart contracts automate and enforce the terms of service agreements between users and providers. These self-executing contracts run on the blockchain and execute predefined actions when specific conditions are met, reducing disputes and ensuring a seamless experience.

Provider Benefits

- **Access to a Broad Customer Base:** Lefeef's platform connects service providers with a global audience, increasing visibility and reach. Providers can showcase their skills and services to a wider customer base, enhancing their business opportunities.
- **Access to a Broad Services Landscape:** Lefeef's platform offers a wide array of services allowing service providers to offer multiple services without leaving the platform.
- **Verified Transactions:** Blockchain technology ensures that all transactions are secure and tamper-proof. Providers can trust that payments will be processed accurately and efficiently, reducing the risk of disputes and fraud.
- **Marketing and Reputation Tools:** Lefeef offers advanced marketing and reputation management tools to help providers grow their businesses. Providers can build their reputation through customer reviews and ratings, attracting more clients and enhancing their credibility.
- **Reduced Costs:** By removing intermediaries, Lefeef reduces transaction costs for service providers. Providers can keep a larger portion of their earnings, increasing their profitability and incentivizing them to offer high-quality services.

TECHNOLOGY

Blockchain Integration

LEFEEF integrates cutting-edge blockchain technology to ensure secure and transparent transactions across our platform. By leveraging the benefits of blockchain, we provide a robust and trustworthy environment for both users and service providers.

Security

Blockchain technology ensures that all transactions are secure and tamper-proof. Each transaction is recorded on an immutable ledger, preventing fraud and unauthorized modifications. Users' financial information and service details are protected with advanced encryption methods, providing peace of mind.

Transparency

Every transaction on our platform is recorded on the blockchain, creating a transparent and auditable trail. This transparency enhances trust and accountability, as users and service providers can verify transaction details and histories. Our system reduces the need for intermediaries, streamlining processes and lowering costs.

Efficiency

Blockchain technology streamlines the payment process, reducing transaction times and costs. Traditional financial systems often involve multiple intermediaries, leading to delays and additional fees. With blockchain, payments are processed directly between users and service

providers, ensuring fast and cost-effective transactions. Our platform supports multiple cryptocurrencies, including our own LEFEEF token, offering flexibility and convenience.

Smart Contracts

Smart contracts automate and enforce the terms of service agreements between users and providers. These self-executing contracts run on the blockchain and execute predefined actions when specific conditions are met. For instance, a smart contract can automatically release payment to a service provider once a job is completed to the user's satisfaction. This automation reduces disputes and ensures a seamless experience.

Decentralization

Our platform is decentralized, meaning it operates without a central authority. This decentralization distributes control and decision-making across the network, reducing the risk of single points of failure. Users have greater control over their data and transactions, enhancing security and privacy.

Scalability

LefeeF's architecture is designed to scale as the platform grows. Our blockchain-based infrastructure can handle increasing transaction volumes without compromising performance. This scalability ensures that our platform can accommodate a growing user base and expanding range of services.

Interoperability

LefeeF's platform is built to integrate with various external services and blockchain networks. This interoperability allows us to connect with other systems, enhance functionality, and offer a wider range of services. For example, we integrate with Google Maps for geo-searching and navigation, and we can connect with identity verification services to ensure the authenticity of users and providers.

User-Friendly Interface

Despite the complexity of the underlying technology, LefeeF provides a user-friendly interface that simplifies the experience for users and service providers. Our mobile app and web portal are designed for ease of use, ensuring that even those unfamiliar with blockchain can navigate the platform with confidence.

WHAT IS DUSP?

The Decentralized Universal Services Platform (DUSP) is LefeeF's innovative solution to unify various service industries under a single, decentralized ecosystem. By utilizing blockchain technology, DUSP offers a transparent, secure, and efficient platform where users can access a wide range of services without the need for intermediaries. This universal platform supports a diverse array of online services, from freelancing and handyman tasks to comprehensive online training, ensuring that users and service providers can interact directly and transparently.

LEFEEF TOKEN (LEFEEF)

A major benefit of LEFEEF being a BEP-20 contract is its integration within the Binance Smart Chain (BSC) ecosystem, which offers numerous advantages for both developers and users. The BEP-20 standard ensures compatibility with a wide range of wallets, exchanges, and decentralized applications (dApps) on the BSC network, fostering seamless interoperability and accessibility. This enhances liquidity and usability, as tokens can be easily transferred, traded, and utilized across various platforms. Additionally, BSC's high transaction speed and low fees make BEP-20 tokens like Lefeef highly efficient and cost-effective for everyday transactions and complex smart contract operations. The robust security features of BSC further protect against potential vulnerabilities, providing a reliable and secure environment for token holders and developers. Overall, leveraging the BEP-20 standard significantly amplifies Lefeef's functionality and reach within the thriving Binance Smart Chain ecosystem.

In our roadmap, LEFEEF native token is to be built from scratch and the new token will replace the BNB LEFEEF Token at later stages of development.

Token Utility

The LEFEEF token is a vital part of our ecosystem, used for transactions within the platform. It enables secure, fast, and cost-effective payments for services. Additionally, the token can be earned and used for various incentives and rewards, fostering engagement and loyalty among users and service providers.

Presale

LEFEEF will enter a presale stage where 20% of the total supply will be sold. The presale will feature an 8% inflation rate every month for three months, with a hard cap at 20%. This structured presale approach ensures a fair and gradual distribution of tokens.

TOKENOMICS

Distribution

The Lefeef token distribution is strategically designed to support its growth and sustainability within the Binance Smart Chain ecosystem.

A significant portion, **200,000,000** tokens, is allocated for the presale, ensuring a strong initial market presence and investor engagement. An equal amount, **200,000,000** tokens, is reserved for the liquidity pool, enhancing trading stability and market liquidity.

Project development also receives **200,000,000** tokens, underscoring Lefeef's commitment to continuous innovation and improvement. The ownership team is allocated **200,000,000** tokens, aligning their interests with the project's long-term success. To foster strategic collaborations, **50,000,000** tokens are designated for partnerships.

The community and staking rewards each receive **50,000,000** tokens, incentivizing user engagement and network security.

Lastly, **50,000,000** tokens are set aside for grants, promoting ecosystem development and supporting promising projects within the Lefeef community. This well-rounded allocation ensures a balanced and robust growth trajectory for Lefeef.

| CATEGORY | ALLOCATION |
|---------------------|----------------------|
| Presale | 200,000,000 |
| Partnerships | 50,000,000 |
| Community Rewards | 50,000,000 |
| Staking Rewards | 50,000,000 |
| Liquidity Pool | 200,000,000 |
| Owners | 200,000,000 |
| Project Development | 200,000,000 |
| Grants | 50,000,000 |
| Total | 1,000,000,000 |

1. **Presale - 200,000,000 Tokens:** This allocation is set aside for the initial presale event, allowing early investors to purchase Lefeef tokens at a potentially discounted rate. This helps to raise initial capital and build a strong foundation of early adopters and supporters.
2. **Partnerships - 50,000,000 Tokens:** These tokens are reserved for establishing and nurturing strategic partnerships. By allocating tokens for partnerships, Lefeef can collaborate with other projects, businesses, and organizations to enhance its ecosystem and reach.
3. **Community Rewards - 50,000,000 Tokens:** This allocation is intended to reward community members for their participation and engagement. These rewards can be given for activities such as referrals, participation in community events, and contributions to the Lefeef ecosystem.
4. **Staking Rewards - 50,000,000 Tokens:** These tokens are designated for rewarding users who stake their Lefeef tokens. Staking helps secure the network and maintain its integrity, and the rewards incentivize users to participate in the staking process.
5. **Liquidity Pool - 200,000,000 Tokens:** A substantial portion of tokens is allocated to the liquidity pool to ensure that there is sufficient liquidity for trading on decentralized exchanges. This helps to provide stability and reduces volatility in the token's price.
6. **Owners - 200,000,000 Tokens:** This allocation is reserved for the project's founders and team members. It aligns their interests with the long-term success of Lefeef, as their tokens will be vested over a period to ensure continued commitment to the project.
7. **Project Development - 200,000,000 Tokens:** These tokens are set aside for ongoing project development. This includes funding for research and development, marketing, infrastructure, and other essential activities that contribute to the growth and advancement of the Lefeef platform.

8. **Grants - 50,000,000 Tokens:** This allocation is intended for grants to support developers, researchers, and other contributors who can add value to the Lefeef ecosystem. Grants help to foster innovation and encourage the development of new applications and use cases for the Lefeef token.

This comprehensive allocation strategy ensures that Lefeef is well-equipped to grow, innovate, and maintain a vibrant and engaged community.

Proof of Stake (PoS) Mechanism

DUSP Coin operates on a Proof of Stake (PoS) consensus mechanism. This environmentally friendly approach ensures network security and efficiency while rewarding participants for their commitment to maintaining the network.

Proof of History (PoH) Integration

LEFEEF P integrates a Proof of History (PoH) generator, which publishes a signature of the state at predefined periods. Each bonded identity must confirm that signature by publishing their own signed signature of the state. This process ensures that all transactions are verified and recorded in a transparent and immutable manner.

Staking

Holders of LEFEEF Coins can stake their tokens to participate in the network's validation process. Stakers are rewarded with additional coins for their efforts, incentivizing active participation and network security.

Security and Transparency

By leveraging blockchain technology, DUSP ensures that all transactions and interactions on the platform are secure and transparent. Users can trust that their data and funds are protected, fostering a reliable environment for service exchange

ROADMAP

Q3 2024

PER-LAUNCH & COMMUNITY

- Launching presale phase
- Build LEFEEF Community, Together, we will build a strong and vibrant community of supporters and contributors who share our vision for a better future.
- Listing on Decentralized Exchanges [DEX], Listing of the LEFEEF token on major cryptocurrency exchanges, enhancing liquidity and accessibility.
- Launch Initial marketing campaign
- Present LEFEEF at Istanbul Blockchain Week 2024

Q4 2024

PARTNERSHIPS & ARCHITECTURE

- LEFEEF Blockchain software architecture and the DUSP platform
- Build Partnerships with external providers and blockchain technology businesses
